

Apex Triggers :

https://trailhead.salesforce.com/content/learn/modules/apex_triggers?trailmix_creator_id=trailblazerconnect&trailmix_slug=salesforce-developer-catalyst

1. Get Started With Apex Triggers

AccountAddressTrigger Code :

```
trigger AccountAddressTrigger on Account (before insert, before update) {
    for (Account a : Trigger.new) {
        if (a.Match_Billing_Address__c == TRUE){
            a.ShippingPostalCode = a.BillingPostalCode;
        }
    }
}
```

2) Bulk Apex Triggers Unit

ClosedOpportunityTrigger Code :

```
trigger ClosedOpportunityTrigger on Opportunity (after insert, after update) {
    List<Task> taskList = new List<Task>();

    for (Opportunity o : [SELECT Id,Name FROM Opportunity
                           WHERE Id IN :Trigger.New]){
        taskList.add(new Task(Subject='Follow Up Test Task',
                               WhatId=o.Id,
                               Status='Not Started',
                               Priority='Normal'));
    }
    if (taskList.size() > 0){
        insert taskList;
    }
}
```

Apex Testing :

https://trailhead.salesforce.com/content/learn/modules/apex_testing?trailmix_creator_id=trailblazerconnect&trailmix_slug=salesforce-developer-catalyst

1)Get Started with Apex Unit Testing

VerifyDate Code :

```
public class VerifyDate {

    //method to handle potential checks against two dates
    public static Date CheckDates(Date date1, Date date2) {
        //if date2 is within the next 30 days of date1, use date2. Otherwise use the
end of the month
        if(DateWithin30Days(date1,date2)) {
            return date2;
        } else {
            return SetEndOfMonthDate(date1);
        }
    }

    //method to check if date2 is within the next 30 days of date1
    private static Boolean DateWithin30Days(Date date1, Date date2) {
        //check for date2 being in the past
        if( date2 < date1) { return false; }

        //check that date2 is within (>=) 30 days of date1
        Date date30Days = date1.addDays(30); //create a date 30 days away from date1
        if( date2 >= date30Days ) { return false; }
        else { return true; }
    }

    //method to return the end of the month of a given date
    private static Date SetEndOfMonthDate(Date date1) {
        Integer totalDays = Date.daysInMonth(date1.year(), date1.month());
        Date lastDay = Date.newInstance(date1.year(), date1.month(), totalDays);
        return lastDay;
    }
}
```

TestVerifyDate Code :

@isTest

```

private class TestVerifyDate {

    @isTest static void testCheckDates() {
        Date now = Date.today();
        Date lastOfTheMonth = Date.newInstance(now.year(), now.month(),
        Date.daysInMonth(now.year(), now.month()));
        Date plus60 = Date.today().addDays(60);

        Date d1 = VerifyDate.CheckDates(now, now);
        System.assertEquals(now, d1);

        Date d2 = VerifyDate.CheckDates(now, plus60);
        System.assertEquals(lastOfTheMonth, d2);
    }
}

```

2) Test Apex Triggers Unit

RestrictContactByName Code :

```

trigger RestrictContactByName on Contact (before insert, before update) {

    //check contacts prior to insert or update for invalid data
    For (Contact c : Trigger.New) {
        if(c.LastName == 'INVALIDNAME') {    //invalidname is invalid
            c.AddError('The Last Name "'+c.LastName+'" is not allowed for
DML');
        }
    }
}

```

TestRestrictContactByName Code :

```

@isTest
private class TestRestrictContactByName {

```

```

@Test
static void invalidName() {
    try {
        Contact c = new Contact(LastName='INVALIDNAME');
        insert c;
    }
    catch (Exception e) {
        System.assert(true);
    }
}
}

```

3) Create Test Data for Apex Tests :

RandomContactFactory Code :

```

public class RandomContactFactory {

    public static List<Contact> generateRandomContacts(Integer num, String lastName)
    {
        List<Contact> contacts = new List<Contact>();
        for (Integer i = 0; i < num; i++) {
            Contact c = new Contact(FirstName=i.format(), LastName=lastName);
            contacts.add(c);
        }
        return contacts;
    }
}

```

Asynchronous Apex :

https://trailhead.salesforce.com/content/learn/modules/asynchronous_apex?trailmix_creator_id=trailblazerconnect&trailmix_slug=salesforce-developer-catalyst

1)Quiz

2)Use Future Methods

AccountProcessor Code :

```

public class AccountProcessor {
    @future
    public static void countContacts(List<Id> accountIds) {
        List<Account> accounts = [SELECT Id,
                                   Name,
                                   Number_of_Contacts__c,
                                   (
                                       SELECT Contact.Id
                                       FROM Contacts
                                   )
                                   FROM Account
                                   WHERE Id in :accountIds];
        for (Account a : accounts) {
            a.Number_of_Contacts__c = a.Contacts.size();
        }
        update accounts;
    }
}

```

AccountProcessorTest Code :

```

@Test
private class AccountProcessorTest {

    static TestMethod void myTest() {
        List<Account> accounts = new List<Account>();
        for (Integer i=0; i<100; i++) {
            Account account = new Account();
            account.Name = 'AccountProcessorTest Account ' + i;
            accounts.add(account);
        }
        insert accounts;

        List<Id> accountIds = new List<Id>();
        List<Contact> contacts = new List<Contact>();
        for (Account a : accounts) {
            accountIds.add(a.Id);
            for (Integer i=0; i<5; i++) {
                Contact contact = new Contact();
            }
        }
    }
}

```

```

        contact.FirstName = 'AccountProcessor Test Contact';
        contact.LastName = String.valueOf(i);
        contact.AccountId = a.Id;
        contacts.add(contact);
    }
}
insert contacts;

Test.startTest();
AccountProcessor.countContacts(accountIds);
Test.stopTest();

List<Account> results = [SELECT Id, Number_of_Contacts__c
                        FROM Account
                        WHERE Id in :accountId];
for (Account a : results) {
    System.AssertEquals(5, a.Number_of_Contacts__c);
}
}
}

```

3)Use Batch Apex

LeadProcessor Code :

```

global class LeadProcessor implements Database.Batchable<sObject>,
Database.Stateful {

    global Integer recs_processed = 0;

    global Database.QueryLocator start(Database.BatchableContext bc) {
        String sQuery = "";
        sQuery += 'SELECT Id, Name, Status,';
        sQuery += 'LeadSource ';
        sQuery += 'FROM Lead ';
        sQuery += 'LIMIT 100000';
        return Database.getQueryLocator(sQuery);
    }

    global void execute(Database.BatchableContext bc, List<Lead> scope) {
        for (Lead l : scope) {

```

```

        l.LeadSource = 'Dreamforce';
        recs_processed += 1;
    }
    update scope;
}

global void finish(Database.BatchableContext bc) {
    AsyncApexJob job = [SELECT Id,
                           Status,
                           NumberOfErrors,
                           TotalJobItems,
                           JobItemsProcessed,
                           CreatedBy.Email
                           FROM AsyncApexJob
                           WHERE Id = :bc.getJobId()];

    String s = "";
    s += job.JobItemsProcessed + ' job items processed ';
    s += 'out of ' + job.TotalJobItems + ' total job items. ';
    s += job.NumberOfErrors + ' error(s) encountered. ';
    System.debug(s);
    s = recs_processed + ' record(s) processed.';
    System.debug(s);
}
}

```

LeadProcessorTest Code :

```

@isTest
private class LeadProcessorTest {

    @testSetup
    static void createLeads() {
        List<Lead> leads = new List<Lead>();
        for (Integer i=0; i<200; i++) {
            Lead l = new Lead();
            l.FirstName = 'Test';
            l.LastName = 'Lead';
            l.Company = 'Test Lead ' + i;
            leads.add(l);
        }
        insert leads;
    }
}

```

```

    }

    static TestMethod void myTest() {
        Test.startTest();
        LeadProcessor lp = new LeadProcessor();
        Id batchId = Database.executeBatch(lp);
        Test.stopTest();

        System.assertEquals(200, [SELECT Count()
                                FROM Lead
                                WHERE Name = 'Test Lead'
                                AND LeadSource = 'Dreamforce']);
    }
}

```

4)Controp Processes with Queueable Apex

AddPrimaryContact Code :

```

public class AddPrimaryContact implements Queueable {

    private Contact contactObj;
    private String state_code;

    public AddPrimaryContact(Contact c, String s) {
        this.contactObj = c;
        this.state_code = s;
    }

    public void execute(QueueableContext context) {
        List<Account> accounts = [SELECT Id
                                FROM Account
                                WHERE BillingState = :this.state_code
                                LIMIT 200];

        List<Contact> contacts = new List<Contact>();
        for (Account a : accounts) {
            Contact c = this.contactObj.clone(false, false, false, false);
            c.AccountId = a.Id;
            contacts.add(c);
        }
    }
}

```

```

        if (contacts.size() > 0) {
            insert contacts;
        }
    }
}

```

AddPrimaryContactTest Code :

```

@isTest
private class AddPrimaryContactTest {
    @testSetup
    static void setup() {
        List<Account> accounts = new List<Account>();
        for (Integer i=0; i<50; i++) {
            Account ny = new Account();
            ny.Name = 'Test Account (NY)';
            ny.BillingState = 'NY';
            accounts.add(ny);
            Account ca = new Account();
            ca.Name = 'Test Account (CA)';
            ca.BillingState = 'CA';
            accounts.add(ca);
        }
        insert accounts;
    }

    static TestMethod void myTest() {
        Contact contactObj = new Contact(
            FirstName = 'California',
            LastName = 'Bob'
        );
        String state_abbrev = 'CA';

        Test.startTest();
        AddPrimaryContact apc = new AddPrimaryContact(contactObj, state_abbrev);
        Id jobId = System.enqueueJob(apc);
        Test.stopTest();

        List<Account> accounts = [SELECT Id, (SELECT Contact.Name FROM
Account.Contacts) FROM Account WHERE BillingState = 'CA'];
    }
}

```

```

        System.assertEquals(50, accounts.size());
        for (Account a : accounts) {
            System.assertEquals(a.Contacts.size(), 1);
        }
    }
}

```

5)Schedule Jobs Using the Apex Scheduler

DailyLeadProcessor Code :

```

global class DailyLeadProcessor implements Schedulable {

    global void execute(SchedulableContext ctx) {
        List<Lead> leads = [SELECT Id,
                            LeadSource
                            FROM Lead
                            WHERE LeadSource = " OR LeadSource = null
                            LIMIT 200];
        for (Lead l : leads) {
            l.LeadSource = 'Dreamforce';
        }

        if (leads.size() > 0) {
            update leads;
        }
    }
}

```

DailyLeadProcessorTest Code :

```

@isTest
private class DailyLeadProcessorTest {

    @testSetup
    static void setup() {
        List<Lead> leads = new List<Lead>();
        for (Integer i=0; i<200; i++) {

```

```

        Lead l = new Lead();
        l.FirstName = 'Test';
        l.LastName = 'Lead ' + i;
        l.Company = 'Test Company ' + i;
        leads.add(l);
    }
    insert leads;
}

static TestMethod void myTest() {
    String jobName = 'Daily Lead Processor - Test';
    String CRON_EXP = '0 0 0 15 3 ? 2017'; // dummy cron entry

    test.startTest();
    DailyLeadProcessor dp = new DailyLeadProcessor();
    String JobId = System.schedule(jobName, CRON_EXP, dp);
    test.stopTest();

    List<Lead> results = [SELECT Id FROM Lead WHERE LeadSource =
'Dreamforce'];
    System.assertEquals(200, results.size());
}
}

```

Apex Integration Services

:https://trailhead.salesforce.com/content/learn/modules/apex_integration_services?trailmix_creator_id=trailblazerconnect&trailmix_slug=salesforce-developer-catalyst

1)Quiz

2)Apex REST Callouts

AnimalLocator Code :

```

public class AnimalLocator {

    public static HttpResponse makeGetCallout {
        Http http = new Http();

```

```

HttpRequest request = new HttpRequest();
request.setEndpoint('https://th-apex-http-callout.herokuapp.com/animals/:id');
request.setMethod('GET');
HttpResponse response = http.send(request);
// If the request is successful, parse the JSON response.
if (response.getStatusCode() == 200) {
    // Deserialize the JSON string into collections of primitive data types.
    Map<Integer, Object> Results
}
}
}

```

AnimalLocatorTest Code :

```

@Test
private class AnimalLocatorTest{
    @Test static void AnimalLocatorMock1() {
        Test.SetMock(HttpCallOutMock.class, new AnimalLocatorMock());
        string result=AnimalLocator.getAnimalNameById(3);
        string expectedResult='chicken';
        System.assertEquals(result, expectedResult);
    }
}

```

AnimalLocatorMock Code :

```

@Test
global class AnimalLocatorMock implements HttpCalloutMock {
    global HTTPResponse respond(HTTPRequest request) {
        HttpResponse response = new HttpResponse();
        response.setHeader('Content-Type', 'application/json');
        response.setBody('{"animal":{"id":1,"name":"chicken","eats":"chicken
food","says":"cluck cluck"}}');
        response.getStatusCode(200);
        return response;
    }
}

```

2)Apex SOAP Callouts

ParkService Code :

//Generated by wsdl2apex

```
public class ParkService {

    public class byCountryResponse {

        public String[] return_x;

        private String[] return_x_type_info = new
String[]{'return','http://parks.services/',null,'0','-1','false'};

        private String[] apex_schema_type_info = new
String[]{'http://parks.services/','false','false'};

        private String[] field_order_type_info = new String[]{'return_x'};

    }

    public class byCountry {

        public String arg0;

        private String[] arg0_type_info = new
String[]{'arg0','http://parks.services/',null,'0','1','false'};

        private String[] apex_schema_type_info = new
String[]{'http://parks.services/','false','false'};

        private String[] field_order_type_info = new String[]{'arg0'};

    }

    public class ParksImplPort {

        public String endpoint_x = 'https://th-apex-soap-
service.herokuapp.com/service/parks';

        public Map<String,String> inputHttpHeaders_x;
```

```

public Map<String,String> outputHttpHeaders_x;

public String clientCertName_x;

public String clientCert_x;

public String clientCertPasswd_x;

public Integer timeout_x;

private String[] ns_map_type_info = new String[]{"http://parks.services/",
'ParkService'};

    ParkService.byCountry request_x = new ParkService.byCountry();

    request_x.arg0 = arg0;

    ParkService.byCountryResponse response_x;

    Map<String, ParkService.byCountryResponse> response_map_x = new
Map<String, ParkService.byCountryResponse>();

    response_map_x.put('response_x', response_x);

    WebServiceCallout.invoke(

        this,

        request_x,

        response_map_x,

        new String[]{endpoint_x,

            "",

            'http://parks.services/',

            'byCountry',

            'http://parks.services/',

            'byCountryResponse',

```

```

        'ParkService.byCountryResponse'}
    );
    response_x = response_map_x.get('response_x');
    return response_x.return_x;
}
}
}

```

ParkLocator Code :

```

public class ParkLocator {
    public static String[] country(String country){
        ParkService.ParksImplPort parks = new ParkService.ParksImplPort();
        String[] parksname = parks.byCountry(country);
        return parksname;
    }
}

```

ParkLocatorTest Code :

```

@Test
private class ParkLocatorTest{

```

```

@isTest

static void testParkLocator() {

    Test.setMock(WebServiceMock.class, new ParkServiceMock());

    String[] arrayOfParks = ParkLocator.country('India');

    System.assertEquals('Park1', arrayOfParks[0]);

}
}

```

ParkServiceMock Code :

```

@isTest

global class ParkServiceMock implements WebServiceMock {

    global void doInvoke(

        Object stub,

        Object request,

        Map<String, Object> response,

        String endpoint,

        String soapAction,

        String requestName,

        String responseNS,

        String responseName,

        String responseType) {

        ParkService.byCountryResponse response_x = new
ParkService.byCountryResponse();

```

```

List<String> lstOfDummyParks = new List<String> {'Park1','Park2','Park3'};

response_x.return_x = lstOfDummyParks;

response.put('response_x', response_x);
}
}

```

4) Apex Web Services

AccountManager Code :

```

@RestResource(urlMapping='/Accounts/*/contacts')
global with sharing class AccountManager {

```

```

    @HttpGet
    global static account getAccount() {

        RestRequest request = RestContext.request;

        String accountId =
request.requestURI.substring(request.requestURI.lastIndexOf('/')-18,
        request.requestURI.lastIndexOf('/'));
        List<Account> a = [select id, name, (select id, name from contacts) from account
where id = :accountId];
        List<contact> co = [select id, name from contact where account.id = :accountId];
        system.debug('** a[0]= '+ a[0]);
        return a[0];

    }

}

```

AccountManagerTest Code :

```

@Istest(SeeAllData=true)

```

```

public class AccountManagerTest {

    @IsTest
    public static void testaccountmanager() {
        RestRequest request = new RestRequest();
        request.requestUri = 'https://mannharleen-dev-
ed.my.salesforce.com/services/apexrest/Accounts/00190000016cw4tAAA/contacts';
        request.httpMethod = 'GET';
        RestContext.request = request;

        system.debug('test account result = '+ AccountManager.getAccount());

    }

}

```

APEX SPECIALIST SUPERBADGE :

https://trailhead.salesforce.com/content/learn/modules/apex_integration_services?trailmix_creator_id=trailblazerconnect&trailmix_slug=salesforce-developer-catalyst

1)Quiz

2)Automate Record Creation

MaintenanceRequestHelper Code :

```

public with sharing class MaintenanceRequestHelper {

    public static void updateworkOrders(List<Case> updWorkOrders, Map<Id,Case>
nonUpdCaseMap) {

        Set<Id> validIds = new Set<Id>();
    }
}

```

```

For (Case c : updWorkOrders){
    if (nonUpdCaseMap.get(c.Id).Status != 'Closed' && c.Status == 'Closed'){
        if (c.Type == 'Repair' || c.Type == 'Routine Maintenance'){
            validIds.add(c.Id);
        }
    }
}

if (!validIds.isEmpty()){
    List<Case> newCases = new List<Case>();
